What You'll Learn

This program is the first university-level AI Governance certificate program in the GTA, where you'll learn how to lead the compliance, risk, privacy, data governance and technology skills required to oversee AI systems.

Students will complete a work-integrated learning project that threads through each course by developing a comprehensive AI Governance Plan.

01 / AI Governance Foundations

This course introduces the foundations of artificial intelligence and AI governance in business, organizational, and public-sector contexts. Learners examine how AI systems work, why AI adoption is accelerating, and the legal, ethical, operational, and regulatory considerations that accompany AI use.

02 / Designing Trustworthy AI

Building on the foundations established in the previous course, this course focuses on designing and integrating trustworthy AI systems. Learners will address key challenges related to fairness, bias mitigation, transparency, accountability, and human oversight.

03 / Operationalizing AI Governance

This course prepares learners to operationalize AI governance across the AI system lifecycle. The course focuses on deploying, monitoring, auditing, and continuously improving AI systems in real-world environments.
